Policy Summit

The landscape of digital assets and the technologies that underpin a global marketplace—where digital goods and currencies are exchanged and owned—are rapidly advancing. Across various blockchain platforms, Canadian companies are at the forefront of creating innovative digital products and services that have the potential to significantly impact our economic landscape.

These technological advancements pose challenges to existing legal and regulatory frameworks, which were originally designed to safeguard the financial well-being of Canadians and ensure the stability of the nation's economy. Moreover, these developments require politicians and policymakers to diligently work to understand and adapt to the fast-paced changes in this digital environment.

Governments play a vital role in promoting the responsible and sustainable growth of the digital asset marketplace for the benefit of Canadians. Similarly, companies and organizations that are leading this innovation have a responsibility to assist governments in comprehending the complexities of the evolving blockchain ecosystem. Achieving this necessitates a foundation of mutual respect, transparency, and, above all, continuous dialogue that fosters a collective understanding of the opportunities and challenges that come with transformative changes.

To support this ongoing conversation, the Canadian Blockchain Consortium facilitates bridging the gap between Canadian governments and the businesses and creators engaged in the burgeoning digital asset sector. It is essential that this mission be advanced through in-person discussions, and thus, we are pleased to hold our second annual policy conference in Ottawa, the capital of Canada, where federal public officials—many of whom will influence the future of the digital asset landscape—convene.

Expected Outcomes of the Summit

The primary objective of this two-day summit is to convene policymakers, regulators, and key industry stakeholders to engage in meaningful discussions about the policies currently affecting the digital asset ecosystem in Canada. By bringing together these diverse voices, we aim to achieve the following outcomes:

- 1. Enhanced Understanding:** Foster a deeper understanding among policymakers and regulators regarding the challenges and opportunities presented by digital assets and blockchain technology.
- 2. Policy Dialogue:** Create a forum for open dialogue on existing and proposed regulations impacting the digital asset space, allowing for the sharing of insights and perspectives from both industry and government representatives.
- 3. Collaboration and Networking:** Encourage collaboration among stakeholders by facilitating networking opportunities that can lead to partnerships and cooperative efforts aimed at addressing shared challenges.
- 4. Actionable Recommendations:** Generate actionable recommendations and strategies to guide the development of balanced and effective policies that support innovation while ensuring the safety and security of financial systems in Canada.
- 5. Continued Engagement:** Establish a foundation for ongoing engagement and collaboration post-summit, ensuring that discussions initiated during the event can lead to sustained dialogue and cooperation moving forward.

Through these outcomes, we aim to strengthen the relationship between public policy and the rapidly evolving digital asset landscape in Canada, ultimately supporting the industry's growth and stability.

Target Audience

The summit is designed to engage a diverse group of participants, including:

- 1. POLICYMAKERS:** Elected officials and government representatives who play a crucial role in shaping the regulatory framework surrounding digital assets and blockchain technology in Canada. Their participation will ensure that government perspectives influence discussions and outcomes.
- 2. REGULATORS:** Representatives from regulatory bodies responsible for overseeing financial markets, consumer protection, and technological innovations related to digital assets. Their insights will be invaluable in understanding the intricacies of compliance and regulatory challenges faced by the industry.
- 3. INDUSTRY STAKEHOLDERS:** Key players from the digital asset and blockchain sectors, including entrepreneurs, technology innovators, and corporate leaders. Their experiences and expertise will provide a practical understanding of the current landscape and the implications of existing policies.
- 4. ACADEMICS AND RESEARCHERS:** Scholars and researchers focusing on blockchain technology, economics, finance, and public policy. Their contributions will provide a theoretical foundation and empirical insights that can enhance discussions and recommendations.
- 5. LEGAL AND COMPLIANCE PROFESSIONALS:** Experts in law and compliance who are navigating the complexities of regulations affecting digital assets. Their involvement will facilitate informed discussions about legal frameworks and best practices.

By bringing together this diverse audience, the summit aims to foster collaboration and create a shared understanding among all stakeholders involved in the evolving digital asset ecosystem in Canada. This collaboration will be critical in addressing the challenges and opportunities presented by digital innovations.
